A **Responsible AI Lead** (or AI Ethics Lead) embeds fairness, transparency, and accountability into how an organization builds and uses AI — turning principles into practices that engineering and product teams actually follow.

WHAT THE ROLE DOES

- Defines responsible-AI principles and turns them into review processes
- Runs ethics and bias reviews for AI products
- Aligns practice with the **NIST AI RMF**, **ISO 42001**, and the [EU AI Act](#)
- Partners with legal, product, and data science across the lifecycle

SKILLS

A blend of **AI governance**, **ethics/policy**, and enough technical fluency to challenge model design. Influence without authority is the core competency — you drive change across teams you don't manage.

CERTIFICATIONS

IAPP **AIGP** is the most directly aligned credential; a GRC base (CRISC/CGRC) and privacy credentials (CIPP) help. Full credential details and salary data are in the [GRC Certifications Guide](#).

THE PATH

1. **Ground yourself** in responsible-AI frameworks and ethics.
2. **Operationalize** — design a bias review or AI impact assessment.
3. **Certify** — AIGP plus a GRC base.
4. **Build influence** — partner across product, legal, and data science.

Step — Apply

FREQUENTLY ASKED QUESTIONS

Is the Responsible AI Lead a technical or policy role?

It blends both: enough technical fluency to challenge model design, plus governance, ethics, and policy skills to embed fairness and accountability across teams.
