

EXECUTIVE BRIEF

What Is AI Observability? Why Every AI Governance Professional Should Understand It

AI observability is how you see what your AI does in production. The five pillars, how it differs from monitoring, and why employers now ask for it by name.

EXECUTIVE SUMMARY

AI observability is how you see what your AI does in production. The five pillars, how it differs from monitoring, and why employers now ask for it by name.

KEY TAKEAWAYS

- AI observability is continuous monitoring, measuring, and understanding of AI systems in production.
- Its five pillars: Performance, Data Quality, Model Behavior, System Health, and Explainability.
- It is not traditional monitoring: it looks forward and backward, catches issues early, and is built to adapt.
- It is becoming a must-have skill across AI governance, risk, compliance, data science, and platform teams.
- It is the connective tissue: governance sets direction, observability provides the visibility, risk and compliance prove accountability.
